HARIPRASAD K H

Full Stack Engineer — Node.js, TypeScript & React

Kozhikode, Kerala 673008 | +91 8848576772 | hariprasad72172@gmail.com
LinkedIn | GitHub

PROFESSIONAL SUMMARY

Full Stack Engineer with 3+ years of professional experience building and operating scalable web applications with Node.js, React.js, TypeScript and MongoDB. Experienced in designing and documenting REST APIs, shipping through Git-based CI/CD pipelines, and deploying services on AWS and Google Cloud Platform. Maintains production systems with application logging, error tracking and issue resolution, and has delivered Stripe billing automation, GCP voice-call pipelines and OpenAI-powered features.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3

Frontend: React.js, Redux, Context API, Material UI, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, JWT, WebSockets, Swagger

Architecture: Microservices, Serverless (AWS Lambda), Event-Driven, Multi-tenant

Databases: MongoDB, PostgreSQL

Cloud & DevOps: GitHub Actions CI/CD, Railway, Git, AWS, GCP

AI Tools: Claude Code, GitHub Copilot, ChatGPT, Perplexity

Quality & Practices: Jest, Code Reviews, Logging & Monitoring, Production Support, Agile

PROFESSIONAL EXPERIENCE

Software Engineer **05/2023 – Present**

Haspaces Technology Solutions (SkillKeepr — AI hiring platform) — Trivandrum, India

- Designed and implemented end-to-end features for a multi-tenant AI hiring platform — React.js/TypeScript front end and Node.js/Express backend services — owning work from API design through deployment and production support.
- Built responsive React.js interfaces with Redux and React Context for recruiter and candidate workflows, using Material UI, Ant Design and Tailwind CSS, and collaborating with product and design to turn requirements into shipped features.
- Designed and built an AI voice agent for automated candidate interviews as a standalone microservice on GCP — Twilio telephony, Google Cloud Speech-to-Text and Text-to-Speech, xAI Grok Voice as a premium voice option, and LLM-driven conversational flows implemented as a phase-based state machine.
- Built chatbot and text assistant features on OpenAI APIs with schema-validated structured outputs, so model responses could be consumed reliably by downstream services.
- Worked across monolith, microservices and serverless (AWS Lambda) architectures; ran two architectural gap analyses of the existing monolith against a proposed three-service design,

surfacing contradictions in scoring weights, trust-tier thresholds and voice state-machine phases before migration work began.

- Led a build-vs-buy evaluation for the voice stack — a managed vendor against a self-hosted GCP + Twilio + Claude API pipeline — and presented a scale-based switching recommendation to leadership, which the team adopted.
- Integrated Applicant Tracking Systems (Workable) through Unified APIs, enabling seamless, event-driven candidate data synchronization and removing manual intervention from the hiring workflow.
- Built an automated subscription billing and renewal system with Stripe and secure webhook handling, and established reusable backend module patterns adopted across projects, cutting development time by ~30%.
- Wrote complex queries and MongoDB aggregation pipelines over multi-tenant candidate and recruiter data, applying indexing so response times held as data volumes grew.
- Supported production services with application logging and error tracking, troubleshooting and resolving live issues; documented REST APIs with Swagger, added Jest coverage, participated in code reviews and shipped via GitHub Actions CI/CD within an Agile (Scrum) team.

EDUCATION & TRAINING

Master of Computer Applications (MCA) — Amity University Online 2026

BSc Physics — Zamorin's Guruvayurappan College 2022

Full Stack Development (MERN) — Brototype, Kozhikode 2023
